1 - LPG SEQUENTIAL CONVERSION KIT,

2- ECONOMIC KIT ECU SET, SGI REDUCER, INJECTOR, GAS VALVE, FILTER

3- ECU SET It ensure the car Works with LPG regards the informed rules, it rules the system pressure gas valve, multivalve, gas level and injectors safety.

4-GAS VALVE It controls to switch on and off the gas wich flows from LPG Tanks trough to the Reducer also by filter inside it make filtration of liquit gas to ensure flow a clean gas. It is an important LPG system unit.

5 -REDUCER It is one of the main important unit of Autogas systems, by engine cooling water get's heat up and evaporate the gas wich is passing trough the reducer, by adjustable gas pressure it delivers the gas to engine as needed.

6- INJECTOR The gas where come's from the reducer by electric signal's from ECU is sent to engine sequentially with injector unit.

7- FILTER This unit installes between the reducer and injectors, evaporated gas is filtrated to engine cleanly by this unit.

8-MULTIVALVE – MINI BLOK Multivalve : Multivalve is unit where installes the LPG tank to ensure %80 Gas filling. Also when there is a high pressure multivalve switch safety valve on 27,5 Bar. It ensure gas delivering by manuel and electrical remote control valve. In case the car catch fire multivalve controls the gas deliver out of tank and help stop the tank blow up. Mini Blok: It installes with multivalve in case of gas leak by regular air circulation it delivers the gas out from the car and stop's the gas place in car.

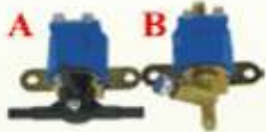

9-FILLING POINT Lpg tank is filling with this unit, by the check-valve it ensure one way gas flow to the tank and block the gas leak from tank,

10-HOSE AND ASEMBLEY SET On the LPG systems gas, water and electric connections part's.

**11 - CARBURATOR
LPG REGULATOR**

12- PETROL VALVE

This unit uses on the carburetion engine installation it controls to switch petrol and LPG on and off, and also it is electricly controlled selenoid valve.

13 - SWITCH

It installes in car cocpits, and controls the car work with gas or petrol fuel. Also show the tank LPG level.

14- CNG CARBURATOR REDUCER

It is one of the main important unit of Autogas systems, by engine cooling water get's heat up and evaporate the gas wich is passing trough the reducer, by adjustable gas pressure it delivers the gas to engine as needed.

15- CNG SEQUANTIAL REDUCER

It is one of the main important unit of Autogas systems, by engine cooling water get's heat up and evaporate the gas wich is passing trough the reducer, by adjustable gas pressure it delivers the gas to engine as needed.

16-CNG FILLING VALVE- GAS VALVE

CNG tank is filling with this unit, by the check-valve it ensure one way gas flow to the tank and block the gas leak from tank,

17- STEEL CNG FUEL PIPE

It makes the flow of CNG gas from high pressure tank to front end CNG Reducer injected directly to engine.

18- ACCESORIES

21 - LPG SKID STATION

19- REPAIR EQUIPMENT

20 - LPG / CNG FUEL TANK
